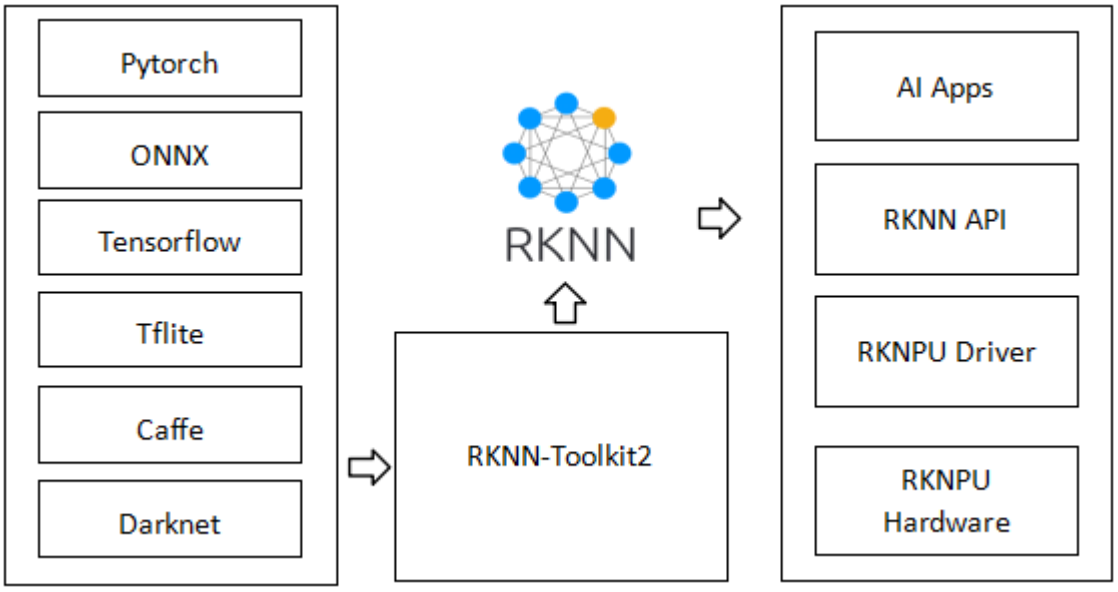
# Description

RKNN software stack can help users to quickly deploy AI models to Rockchip chips. The overall framework is as follows:



In order to use RKNPU, users need to first run the RKNN-Toolkit2 tool on the computer, convert the trained model into an RKNN format model, and then inference on the development board using the RKNN C API or Python API.

- RKNN-Toolkit2 is a software development kit for users to perform model conversion, inference and performance evaluation on PC and Rockchip NPU platforms.
- RKNN-Toolkit-Lite2 provides Python programming interfaces for Rockchip NPU platform to help users deploy RKNN models and accelerate the implementation of AI applications.
- RKNN Runtime provides C/C++ programming interfaces for Rockchip NPU platform to help users deploy RKNN models and accelerate the implementation of AI applications.
- RKNPU kernel driver is responsible for interacting with NPU hardware. It has been open source and can be found in the Rockchip kernel code.

# Support Platform

- RK3588 Series
- RK3576 Series

- RK3566/RK3568 Series
- RK3562 Series
- RV1103/RV1106
- RV1103B/RV1106B
- RV1126B
- RK2118

Note:

**For RK1808/RV1109/RV1126/RK3399Pro, please refer to :**

https://github.com/airockchip/rknn-toolkit

https://github.com/airockchip/rknpu

https://github.com/airockchip/RK3399Pro_npu

# Download

- You can also download all packages, docker image, examples, docs and platform-tools from RKNPU2_SDK, fetch code: rknn
- You can get more examples from rknn mode zoo

# Notes

- RKNN-Toolkit2 is not compatible with RKNN-Toolkit
- The supported Python versions are:
  - Python 3.6
  - Python 3.7
  - Python 3.8
  - Python 3.9
  - Python 3.10
  - Python 3.11
  - Python 3.12
- Latest version:v2.3.2

# RKNN LLM

If you want to deploy LLM (Large Language Model), we have introduced a new SDK called RKNN-LLM. For details, please refer to:

https://github.com/airockchip/rknn-llm

# CHANGELOG

## 1. v2.3.2

- Support for RV1126B platform
- Improved einsum and Norm operations support
- Added automatic mixed precision functionality
- Enhanced graph optimization capabilities

for older version, please refer CHANGELOG

# Feedback and Community Support
